

Continuous Engineering for the Internet of Things Summit 2016

November 15 - 17, Long Beach, California (on the Queen Mary)

IBM Internet of Things

IBM

Call for Abstracts is open

We are back for 2016! [The IBM Continuous Engineering for the Internet of Things Summit 2016](#) will again deliver in-depth technical content targeted at architects, developers, Testers, integrators and Managers by offering lectures and hands-on labs to expand your knowledge and expertise on the latest technologies, trends, tips and techniques. We invite business leaders and technical professionals to submit conference breakout session for consideration to one of the below tracks. Please reference track and session descriptions below when creating your topic breakout session proposals.

This conference delivers near 125 in-depth technical sessions and panels across the following conference tracks:

- **Watson Analytics**– Cognitive computing, analytics and reporting
- **Best Practices for Continuous Engineering** - Success stories, Challenges and solutions which helped transform your business
- **Model Based Systems Engineering (MBSE)** - best practices, new implementations and advances in MBSE and MBE for software development
- **Requirements Management** - Best practices and advances in RM for IoT development
- **Quality Management** - Applying the latest QM best practices to deliver high quality results in IoT development
- **Collaboration and Configuration Management** - Improving collaboration and configuration management across the development lifecycle for better IoT outcomes
- **Engineering Research** - What's new in research for the IoT and systems engineering
- **Programing for the Internet of Things** - Best practices for SW development in the connected world
- **IoT Platform** - How to design to connect and thrive on the IoT using the IBM IoT Platform
