

Blended Learning Solutions

LearnQuest believes that learning operates on a continuum and is not isolated to individual training events. Our blended approach combines the appropriate learning modalities, technologies, delivery times, and accessibility options to create custom solutions that meet client learning goals and objectives in a broad range of learning environments.

LearnQuest's blended solutions combine the following offerings:

Instructor-led training: LearnQuest has a vast library of off-the-shelf proprietary instructor-led content that can be leveraged for ILT delivery, eLearning development, job aids, and other project deliverables. Our in-house expertise and industry leading training content can help jump-start any customized delivery project.

Rapid eLearning Development: LearnQuest employs a broad range of rapid development tools. We work with clients to develop a solution that utilizes the appropriate tools and technologies to ensure the solution is developed on time, within budget, and is maintainable.

Custom eLearning Development: Some solutions require more complex content creation with higher levels of interactivity to engage the learning, such as simulations and gaming. LearnQuest employs a team of highly-skilled developers and graphic designers to create a seamless end product.

Learning Labs: A key element of success is the ability to practice—and make mistakes—in a safe environment. LearnQuest utilizes self-paced hosted labs that can be incorporated into a blended training package. Our Learning Labs options provide a flexible solution by delivering 24/7 lab access with a convenient platform that eliminates setup time and reduces travel and facility expenses.

Collaboration Sites: Throughout training, students need a resource to keep up with changes, find reference materials, and answer questions. Collaboration sites act as landing pages for new and experienced students alike, directing them to training, documents, resources, and support.

Mobile Platforms: Employees need access to information beyond the working environment, and having that information available via mobile devices can contribute to increased performance. LearnQuest utilizes cutting edge technology to convert learning solutions, create custom applications, and also make support documentation accessible.

The success of an organization's training endeavor only begins with the content. As part of LearnQuest's learning design and development methodology, we analyze all aspects of learning to develop a completely customized training solution to best fit the unique needs of each individual client.
